

# KES GREENHOUSE

## 1st Graders Propagate COLEUS From Seed!

COLEUS seeds are so tiny that we planted them by pouring them from a salt shaker! Your seedlings are still tiny, but they will get a little bigger. Also the leaves are green now, but as they grow you will see other colors, such as red.

## Caring For Your COLEUS

Water when the soil starts to dry out. Keep your COLEUS in a warm place that gets medium sun. COLEUS is a tropical plant so if you want to put it outside wait until the nights are warm, around the end of May.
